

**Q.** What are the key steps to follow in order to maximize week long wear?

**A.** Use VINYLUX as a System; start with P.E.P. followed by VINYLUX Color and always use VINYLUX Weekly Top Coat.

**Q.** Can you use a CND base coat for extra adhesion?

**A.** No, a base coat will negate the performance of VINYLUX because the adhesives are in the color coat.

**Q.** What makes VINYLUX bond to the nail without a base coat?

**A.** VINYLUX has adhesion promoters in the color coat making the color self-adhering without a base coat.

**Q.** Can you use a different CND top coat?

**A.** No, the VINYLUX Top Coat has our innovative Pro-light technology with photo initiators and becomes more durable with exposure to natural light.

**Q.** Can you use VINYLUX Top Coat with other enamel brands? Will it work as well?

**A.** It can be used with other enamel brands, but cannot guarantee week long wear. The system yields the ultimate performance.

**Q.** Can you use CND SolarSpeed Spray with VINYLUX?

**A.** Yes.

**Q.** Can you layer VINYLUX shades to create new colors?

**A.** VINYLUX does not have effects for layering, however, sheer shades can always be used to layer for design.

**Q.** How do you remove VINYLUX? (Nail polish remover, pure acetone or CND Shellac Nourishing Remover?)

**A.** VINYLUX is best removed with CND Shellac Nourishing Remover or Acetone.

**Q.** Does using SolarOil on a daily basis affect VINYLUX wearability?

**A.** SolarOil will enhance wearability because it improves the health of the nail.

**Q.** Will all new colors and collections from VINYLUX always be matched with Shellac colors?

**A.** VINYLUX will launch with more colors than Shellac and thus have many of its own colors. However, Shellac and VINYLUX will launch the same seasonal collection colors.

**Q.** Can you guarantee week long wear?

**A.** Nail conditions vary which will affect product performance. Healthy nails without delamination or drying issues perform for one week.
